

SAFE USE OF GLASS AND CERAMICS

Instructions for use of products of Glasmark Ltd.

Glasmark products are designed for food contact, and we make every effort to ensure that they meet the highest quality standards.

All our products comply with international and national environmental, health and safety standards. We have incorporated the following into our company management policy the principle of sustainable development, and we take care to maintain the highest standards and norms in every area of our business

Glass and ceramic are sensitive materials, so be careful when using them and follow basic rules to avoid damaging the dish.

1. First use

Before using glass and ceramic dishes for the first time, wash them thoroughly in a **warm water with dishwashing liquid, and then dry them.**

2. Washing

We recommend washing glassware and ceramics by hand, as washing in the dishwasher can cause damage and tarnishing of the products. To wash, use a **mild liquid for dishes and a soft sponge.** Avoid using hard brushes or wire brushes, which can scratch the surface.

3. Washing in dishwasher

When washing dishes in the dishwasher, set the **program designed for washing glassware,** and use appropriate chemicals.

4. Drying

After washing, dry the glass thoroughly with a soft cloth or paper towel. This will avoid the formation of streaks and calcium deposits.

5. Thermal shock and hot liquids

Rapid heating followed by cooling, which will cause a **temperature difference of approx. 30st. C can cause glass and ceramic products to break.** Glass is sensitive to sudden temperature changes, so it should not be heated or cooled too quickly. Before pouring hot water, make sure the dish is at room temperature or near the temperature of the liquid. Do not heat the vessel to **above 60 degrees C,** such as by pouring in hot liquid.

6. Children

Children should not use glass and ceramic utensils without adult supervision.

7. Storage

Store glass and ceramics in a dry and well-ventilated place, in a way that prevents them from falling over. **Also avoid stacking them on top of each other** without proper protection to avoid scratches

Remember that regular washing and proper storage will help keep glassware and ceramics in good condition for a long time.
